

Profile Correction: Profiloplasty revisited

By Professor Bob Khanna

This masterclass is a must for any clinician wishing to be able to comprehensively offer full facial sculpting for their patients. Professor Khanna has developed strategies, concepts and techniques to enable the most optimum results possible from the forehead to the nose, lips, chin and submental region, in a seamless fashion. These concepts and techniques are routinely used globally by many leading aesthetic practitioners.

In 2015, Professor Khanna launched his latest profiloplasty concepts at the Aesthetic Medicine World Congress in Monaco, attended by over 12,000 clinicians from all over the world. His 'BK P-Line' system has since been adopted by many leading aesthetic practitioners wishing to achieve the ultimate profiloplasty results. It has also been featured in the Aesthetics Journal (Volume 6/Issue 6) in May 2019. Since then, he has made some minor modifications to further improve the outcomes for both and female patients. He uses a combination of various treatment modalities, which include Botulinum Toxin, dermal fillers, thread lifting, PRP and radio frequency micro-needling. All of these procedures will be referenced during this masterclass, coupled with the precise strategic approaches. He will be discussing many case studies to demonstrate these principles.
